

The next generation of hydraulic control Precise, smart, powerful!

POS-324-U-PFN - Two-axis positioning and synchronization control module

The POS-324-U-PFN expands on the proven POS-124-U-PFN synchronization controller. It offers the following new features: script-based programming with FlexiMod, intelligent axis motion independent of the path profile, a simulation mode for testing the application, and Profinet communication expandable to 64 bytes.

UHC-326-U-PFN - Hydraulic control unit for positioning and pressure control

The UHC-326-U-PFN is a hydraulic control unit designed for precise axis positioning with separate pressure control. It is suitable for all applications in which both position and pressure must be controlled along a single axis. The unit can be flexibly adapted to the application using the integrated FlexiMod scripting system.

PAM-190-X-S9 - Space-saving versions of our affordable plug-in amplifiers

All versions of our plug-in amplifiers are now also available with a 180° rotated base, which allows for more flexible cable routing. Both the standard PAM-190-P plug-in amplifier with current or voltage input and the version with an IO-Link connection are available.

What new features can you look forward to in 2026?

- ✓ PAM-193-H Single-channel power amplifier with high-side measurement
- ✓ PAM-393-P An upgrade to our proven PAM-193 with a touchscreen
- ✓ POS-324-U-ETC Custom axis coordination with EtherCAT connectivity

All modules are available from stock on short notice!
